**Subject:**  
**Jeeps with ParkSense proximity  
sensor feature require Smart Diode  
Wiring Kit #152789**

TSIB number 153

**Problem:** If you use regular diodes on a Jeep with ParkSense proximity sensors (see photos), the dash electronics will activate while towing, which may result in a dead or discharged battery.

**Solution:** The vehicles marked YES in the photos below have proximity sensors and need Smart Diodes Kit #152789. Those marked NO can use Universal Wiring Kit #154.

*Note: The photos below are from various late model Jeeps. Your exact model may appear slightly different. If you are in doubt, contact the vehicle manufacturer to ascertain whether or not your vehicle has this feature.*
